Portfolio Md Maruf Bin Salim mdmarufbinsalim

SUMMARY

Software engineer who designs and ships systems where correctness matters - multi-tenant SaaS backends, domain-specific editors and the APIs behind them - owning delivery from architecture decisions through production rollout.

SKILLS

Backend: NestJS, Node.js, Express, Go, REST API design, WebSockets

Data & platform: PostgreSQL, MongoDB, TypeORM, Redis, Docker, AWS, CI/CD (GitHub Actions), Git

Frontend: React, Next.js, Vue, Nuxt.js, TypeScript, Redux Toolkit

Practice: Agile / Scrum, Technical leadership, Code review, Scalable architecture, Multi-tenancy, Queues & background jobs

EXPERIENCE

Software Engineer, Mediusware

May 2025 - Present

Dhaka, Bangladesh

- Led a team of six across API, web and mobile in Agile cycles - sprint planning, code review, release - building a 31-module NestJS API of 204 endpoints behind one generated OpenAPI contract, with an in-app currency on an append-only ledger whose escrowed bids settle under row-level locking rather than double-spending a balance.
- Architected a multi-tenant SaaS backend in NestJS with tenant isolation enforced at the framework level, alongside a modular, maintainable structure for an enterprise-grade product.
- Built a custom Slate-based text editor for clinicians on a Node.js and NoSQL backend, cutting per-keystroke re-renders across documents of 2,000+ custom elements to the single element that changed.

Full Stack Software Developer, abectiv s.r.o

November 2023 - December 2024

Czech Republic (remote)

- Architected backend services in NestJS and PostgreSQL - scalable APIs, background jobs and automation workflows.
- Built internal tools in React and NestJS with role-based access and real-time data handling.
- Designed database schemas and optimised queries across trading and operational systems, improving performance and protecting data integrity.

Full Stack Software Developer, Kiuub Studio

April 2022 - August 2023

Slovakia (remote)

- Architected Node.js backend systems integrated with WeWeb - scalable APIs, authentication flows and business logic for low-code and fully custom platforms.
- Built web scraping and automation tools for structured data extraction, feeding PostgreSQL and NoSQL systems.
- Worked with a distributed team of designers, low-code builders and product stakeholders on architecture and delivery.

Software Engineer, Independent - Fiverr / Upwork

January 2022 - November 2023

Remote

- Delivered custom software and technical consulting for clients and enterprises using Next.js, Vue.js and modern JavaScript frameworks.
- Translated client requirements into scoped, delivered applications, from first conversation to handover.

EDUCATION

BSc in Computer Science and Engineering, North South University

January 2024

Dhaka, Bangladesh
